Presidential Lectern

SUCCESSFUL SPEECHES START HERE . . . with the
TelePro Presidential Lectern

You're looking at the "ultimate" lectern

Step behind it and you're in command.

In total command of your speech material

. . . in total command of your audience.

The Presidential Lectern provides you with
the most favorable conditions for

"face to face" communications. At your

fingertip command, the Presidential

Lectern adjusts to your personal height

requirement by virtue of a silent, powerful

built-in motorized elevator — assuring

each speaker of direct eye-to-eye audience

contact. To eliminate face shadows, and

match the ambient light conditions

of the room in which you are speaking,

the Presidential Lectern provides built-in

"fill lighting" at fingertip control.

Little things can mean a lot in a lectern,

and the Presidential provides them all:

A convenient place for your ash tray,

a "one-minute elapsed time clock" and a

time-of-day clock. There's even running

water kept cool and refreshing from a built-in

insulated bottle through a tap.

Aside from its total functionality, the

Presidential Lectern is good to look at.

Trim modern lines finished in stain and burn

resistant Walnut micarta make the

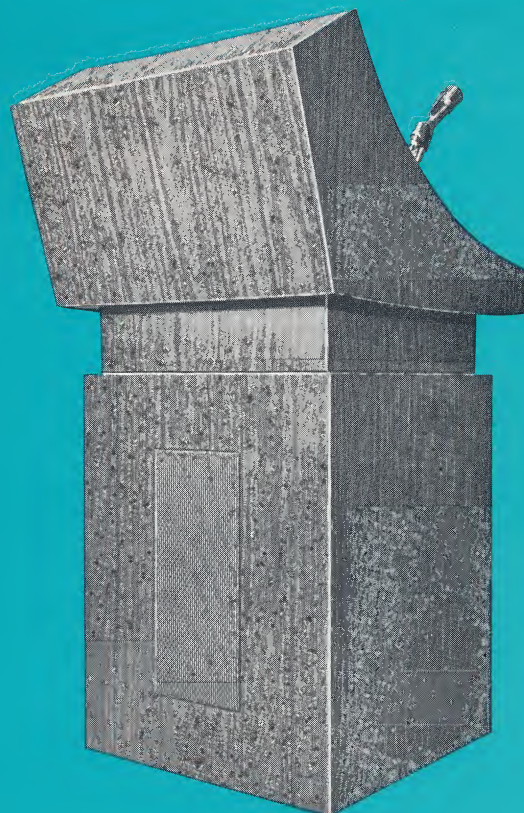

Presidential Lectern a truly outstanding

addition to any auditorium, lecture hall,

class or meeting room. Adequate provision has

been made to include a built-in speaker,

and a TelePrompTer reading unit.

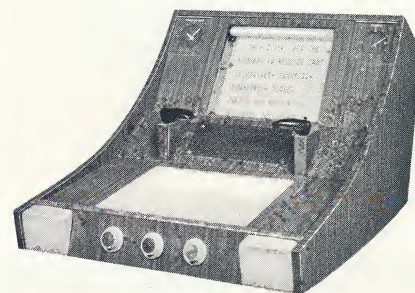

THE TelePro *Presidential Lectern*
